## FILL DIRT QUALITY STATEMENT

Cleaned and Screened Material

**Material Source:** ATLAS Recycling Yard - 4470 122nd Avenue N, Clearwater, FL 33762

### To Whom It May Concern:

ATLAS Recycling LLC hereby confirms that fill dirt supplied from our Clearwater yard is cleaned, screened, and processed through our standard material-handling procedures to remove oversized debris and unsuitable material to the extent practicable.

Based on our processing and visual quality-control review, the material is provided in good condition and is intended for use as general construction fill for civil/sitework applications. The material is screened for consistency and quality prior to release and, to the best of our knowledge, meets customary expectations for clean, screened fill dirt, subject to the governing project plans, civil specifications, and any owner or engineer testing requirements.

ATLAS Recycling does not knowingly accept or provide fill material containing trash, excessive organics, hazardous waste, or other unsuitable contaminants. Any project-specific compaction, proctor density, environmental, geotechnical, or chemical testing requirements remain the responsibility of the receiving contractor, project engineer, or owner unless separately contracted in writing.

This letter is provided for the limited purpose of assisting the client, civil site contractor, and related project stakeholders with documentation of ATLAS Recycling's material-handling and screening process. Please contact us if additional project-specific documentation is required.

Sincerely,

**ATLAS Recycling LLC**  
Steve Griffin
